

ClaimLinker

Linking Text to a Knowledge Graph of Fact-checked Claims

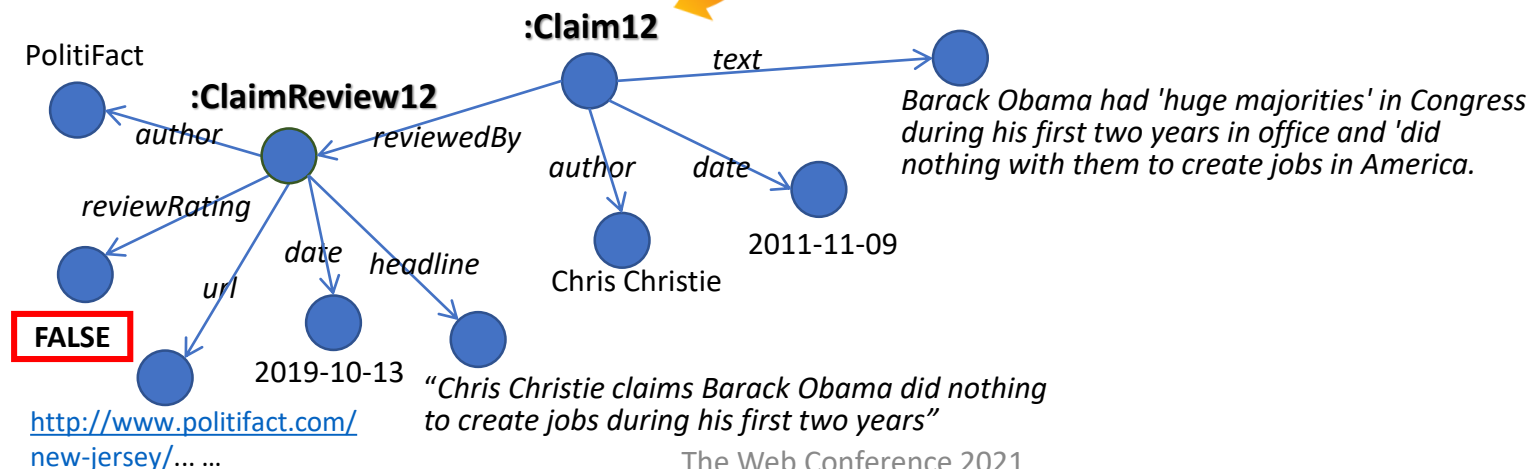

Evangelos Maliaroudakis, Katarina Boland, Stefan Dietze,
Konstantin Todorov, Yannis Tzitzikas, Pavlos Falalios

ClaimLinker in a nutshell

- An **API** and **Web Service** that **annotates** on the fly a text with **fact-checked claims** mined from popular **fact-checking sites** and **integrated into a rich knowledge graph**
 - Offering a **novel kind of semantic annotation** of unstructured content!
 - Fully unsupervised, modular, efficient, scalable, effective (**76% Precision@1**)

Obama can complain about Republicans in the House as much as he wants. But in the first two years, he had, you know, huge majorities in the House and Senate, and did nothing with them to create jobs.

Dog-owners face 78% higher risk of catching Covid-19 and home grocery deliveries DOUBLE the risk, study finds

- Experts said effect of dog ownership was comparable to returning to the office
- Dogs may catch coronavirus or transport it after touching unclean surfaces
- Scientists said dogs should be included in social distancing rules by owners

Walking your pet dog may raise your risk of catching coronavirus by 78 per cent and getting groceries delivered to your home could double the risk, a study has claimed.

Spanish researchers looked at how different behaviours change people's likelihood of catching the virus — and found getting supermarket deliveries and dog-walking

HEALTH / CORONAVIRUS

Research suggesting increased Covid-19 risk for dog-owners may be barking up the wrong tree

24 NOVEMBER 2020

WHAT WAS CLAIMED

Walking your pet dog may raise your risk of catching coronavirus by 78 per cent.

OUR VERDICT

This is based on research which has many flaws. In particular, suggestions this is down to dogs acting as a Covid-19 vector are based on limited evidence.

verdict

Motivation

- Explosive growth of fake news on the Web
 - Potential to affect public opinion towards important decisions (e.g., vaccination)
 - Erosion to democracy and public trust!

- Already, non-profit organizations in many countries fact-check tens of claims every day
 - PolitiFact, FullFact, Snopes, CheckYourFact, ...
 - **Very time consuming process!**
- Need for mechanisms to facilitate the detection of false/misleading information
 - **Especially when the same information has already been fact-checked!**

- *How to quickly check if a statement's veracity has been already examined by a trustworthy fact-checking portal?*
 - *How to check if there are fact-checked claims that can provide information about a statement's veracity?*

Round Table at the CLEF-2020 CheckThat! Lab on September 22, 2020:
David Corney, Full Fact

What do fact checkers want?

1. To know what is the most important claim to check today *Check-worthiness*
2. To know when someone says something that they've already checked *Verified claim retrieval*
3. To check claims as quickly as possible *Evidence retrieval / claim verification*

Background – ClaimsKG

<https://data.gesis.org/claimskg/>

A. Tchechmedjiev et al., ClaimsKG: A knowledge graph of fact-checked claims. In *International Semantic Web Conference* (pp. 309-324). Springer, 2019.

- RDF knowledge graph of fact-checked claims
 - Generated through a pipeline which periodically harvest data from highly reputable **fact-checking portals**
 - Claims and review articles are annotated with **DBpedia entities**
 - **RDFS model** based on established vocabularies such as *schema.org*
 - It currently contains metadata for around **35K** fact-checked claims
- Enables running complex structured (SPARQL) queries
 - About truth values, authors, dates, related entities, topics, and other contextual information
 - *E.g., “Give me false claims of 2017 mentioning both Donald Trump and the FBI”*

Claim Linking – Problem Definition

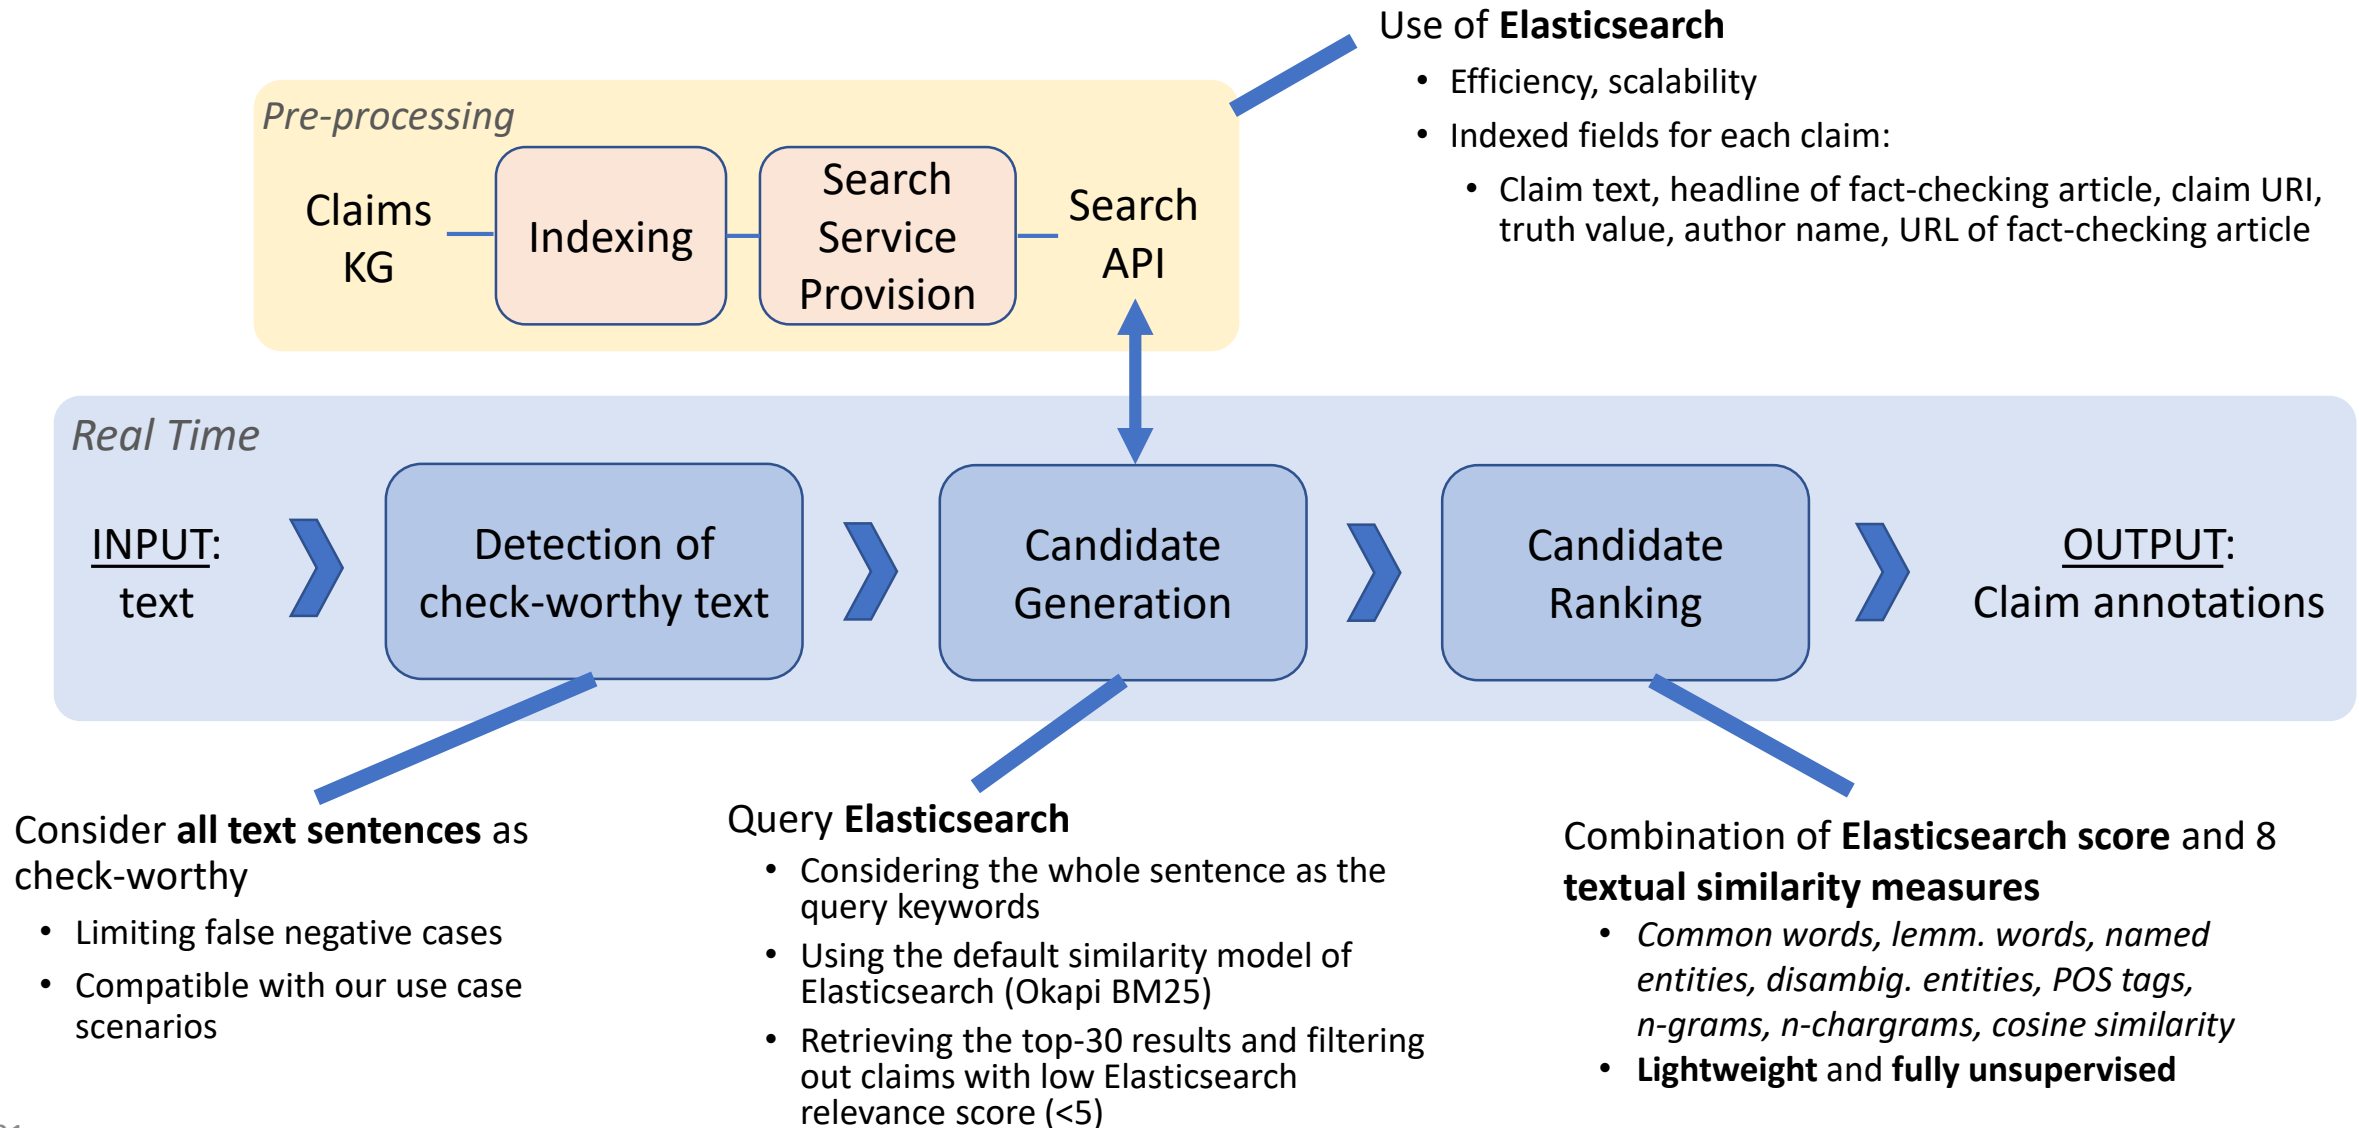

- Given:
 - A knowledge graph of fact-checked claims (e.g., ClaimsKG)
- Input:
 - A text (e.g., a sentence in a news article, a tweet, etc.)
- Output:
 - A set of claim annotations of the form:

<text snippet, position, ranked list of <claim URI, score> pairs>

Obama can complain about Republicans in the House as much as he wants. But in the first two years, he had, you know, huge majorities in the House and Senate, and did nothing with them to create jobs.

- <http://data.gesis.org/claimskg/claim12> (score: 0.85)
- <http://data.gesis.org/claimskg/claim17> (score: 0.60)

System Overview

Evaluation results

- Ground truth:

- Test set of CLEF2020 Check-That! 2020 Task 2 (*verified claim retrieval*)
 - 200 tweets to be matched against 10,373 fact-checked claims (v.3.0 of the dataset)
- No training, no tuning! Tweet pre-processing: removal of URLs

Ranking method	Correct claim in top position (P@1)	Correct claim in top-3 list	Correct claim in top-5 list
Elasticsearch score (100%)	71.5%	79.0%	80.5%
Textual Similarity Measures (100%)	62.0%	77.5%	82.5%
Combination (50% / 50%)	76.0%	80.0%	83.5%

- Our combined method **outperforms all unsupervised methods** participated in the challenge
- P@1 can reach ~**90%** if we consider a higher Elasticsearch score threshold (20 instead of 5)
 - However, then recall drops to ~63%

System components & use cases

- Java Library
 - It communicates with an Elasticsearch service and offers the claim linking functionality
- Web Service
 - It accepts HTTP requests and returns the results in JSON
- Web application
 - It offers a form where the user can give some text and check if there are fact-checked claims linked to that text
 - Demo at: <http://users.ics.forth.gr/~fafalios/claimlinker/>
- Bookmarklet
 - It allows a user to select a piece of text in any web page (e.g., in an online news article) and check if there are fact-checked claims linked to the selected text
 - Usage guidelines at <http://users.ics.forth.gr/~fafalios/claimlinker/>

All available as open source: <https://github.com/malvag/ClaimLinker>

Web Application

<http://users.ics.forth.gr/~fafalios/claimlinker/>

You know, interest on debt will soon exceed security spending.

You can also use the ClaimLinker service as you browse the Web through
How to use it:
1. Drag and drop the above link in your bookmarks
2. Select a piece of text in a webpage and click the bookmark

Exploration of claim-related Linked Data

Conclusions

- **ClaimLinker**: linking text to fact-checked claims of a knowledge graph
 - Offering a **novel kind of semantic annotation** of unstructured content!
 - Fully unsupervised, modular, efficient, scalable, effective (**76% Precision@1**)
 - Outperforming existing unsupervised methods
- Through the claim URIs of an annotation, one can browse the knowledge graph and explore the claim-related **Linked Data**
 - For example, we can find other claims related to the same or similar entities, or claims originating from the same source
- Future Work:
 - Consider more advanced approaches to candidate generation and ranking (in order to better cater for the **vocabulary mismatch problem**)
 - E.g., Self-supervised (transformer-based) language models
